I.Title

We decided to develop an **AI trainer app by adding diet** management.

II. Motivations

Our motivation for selecting this topic is increasing interests on health managements nowadays and providing much more healthy experience to customers who use trainer apps. These days, more and more people are interested in self-care and self-control and also many kinds of fitness apps are coming out. We can record our meals by ourselves in many different apps but there are few apps providing detailed diet programs. These issues are became our main motivations.

III. Goals and Objectives

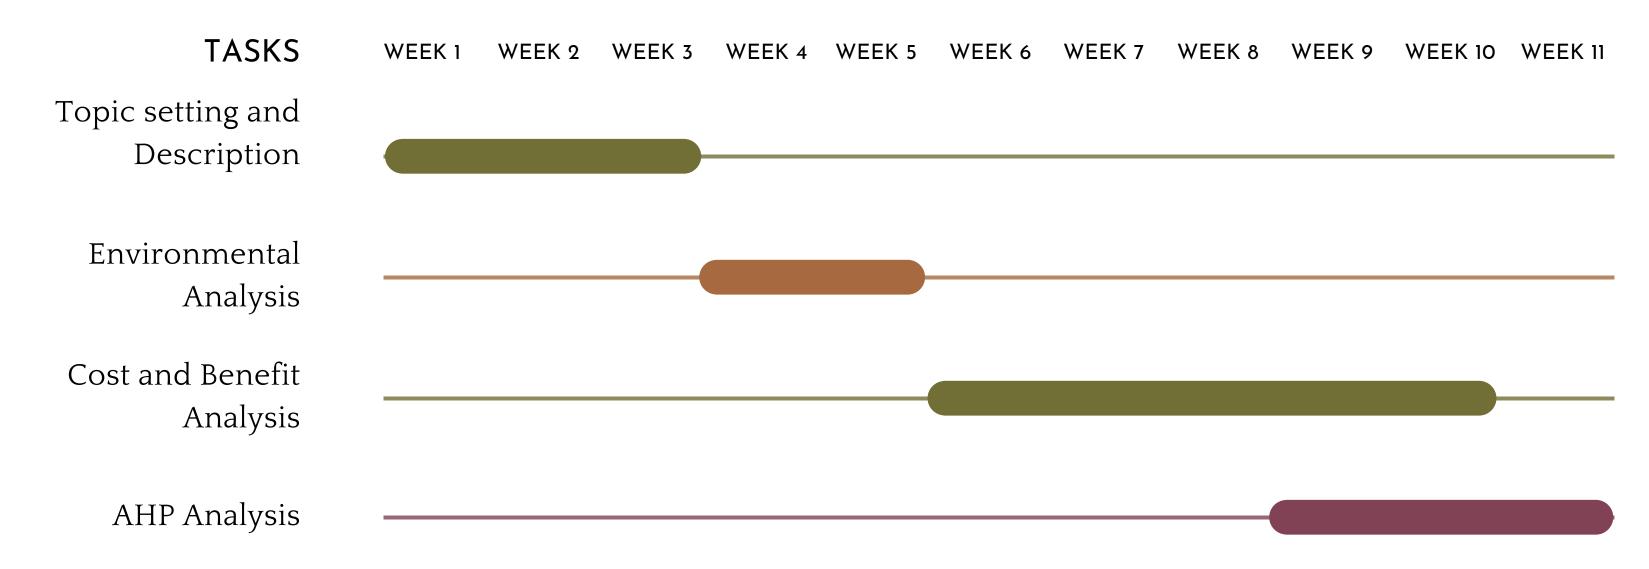

What are your major goals of your project?

As we mentioned at the previous slide, we are thinking about to add diet management program to the fitness app. We are going to provide new diet service that can suggest the personalized program to individuals. It will automatically calculate calories that the customer has to take according to the customer's physical information so it can provide the program to individuals. In addition, it can also record customer's meal more exactly by AI food lens which can analyze the nutritional ingredients of the meal.

What do you expect to learn from your project?

Through this project, we would like to understand a detailed and step-by-step set of procedures and methodologies for IT investment decision-making and to develop executive capabilities for IT investment evaluation.

IV. Project Schedule

I. ITEM

1. Item Decription

1. Analysis of food photos:

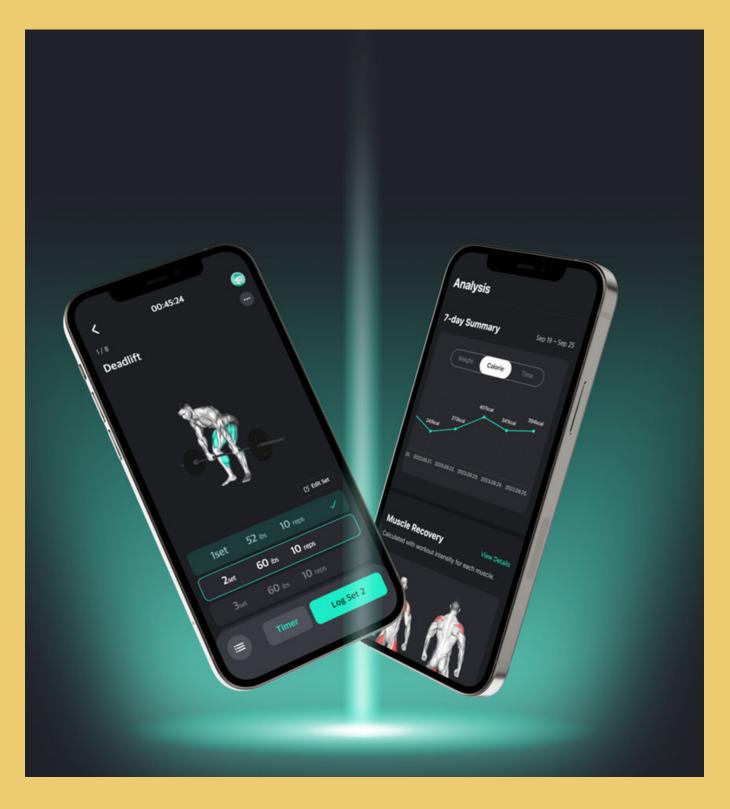

When you take a picture, AI quickly analyzes the ingredients of food and accurately provides nutritional ingredients such as protein, carbohydrates, and fats. Users can also quickly check the calorie information of each food.

2. Customized Diet Recommendations:

We'll recommend a customized diet based on the user's personal physical information, activity level, and goals. It helps users reach their goals by considering nutritional recommendations.

3. Nutritional ingredient tracking:

Users can easily track their daily intake of nutrients in the app. Graphs and statistics allow you to visually check your nutritional status

2. Perspective in the analysis - (supplier's perspective)

• Improved user experience:

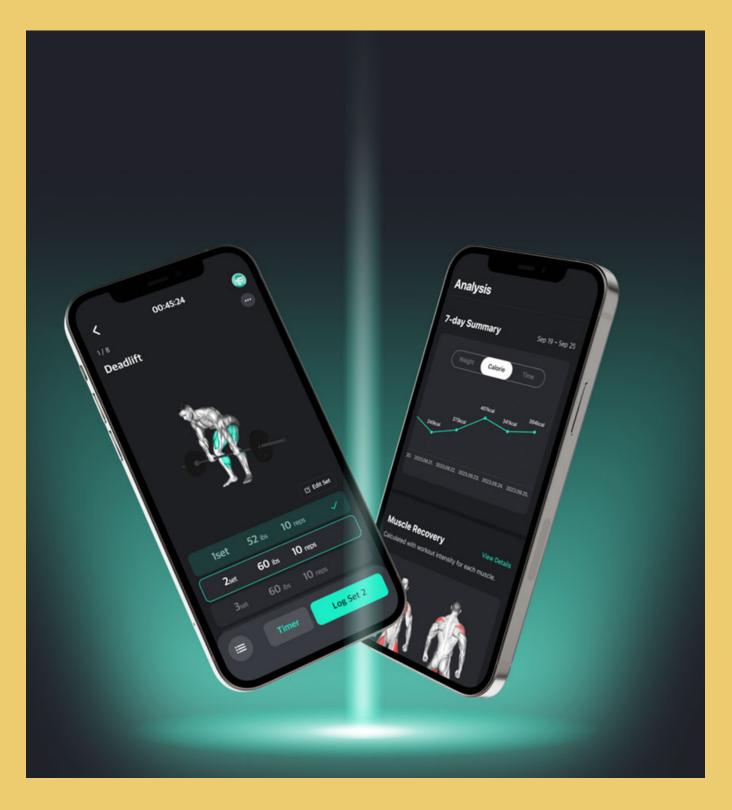

The new diet management features make the application more attractive by providing users with a rich experience.

Personalized diet recommendations will help users achieve their goals, leading to high satisfaction.

• Boost market competitiveness:

The health and fitness application market is competitive, and new features can improve the company's market competitiveness.

Providing nutritional information and customized diet recommendations can provide more value to users, which will help maintain existing users and acquire new users.

2. Perspective in the analysis (supplier's perspective)

• Customized marketing and collaboration opportunities:

Utilizing users' diet management data can open up opportunities for cooperation with food companies or fitness brands.

Based on this data, the company can maximize revenue through customized marketing and affiliate activities.

• Maintain users and increase loyalty:

Customized diet recommendations encourage users to continue using the application, which contributes to increasing user loyalty.

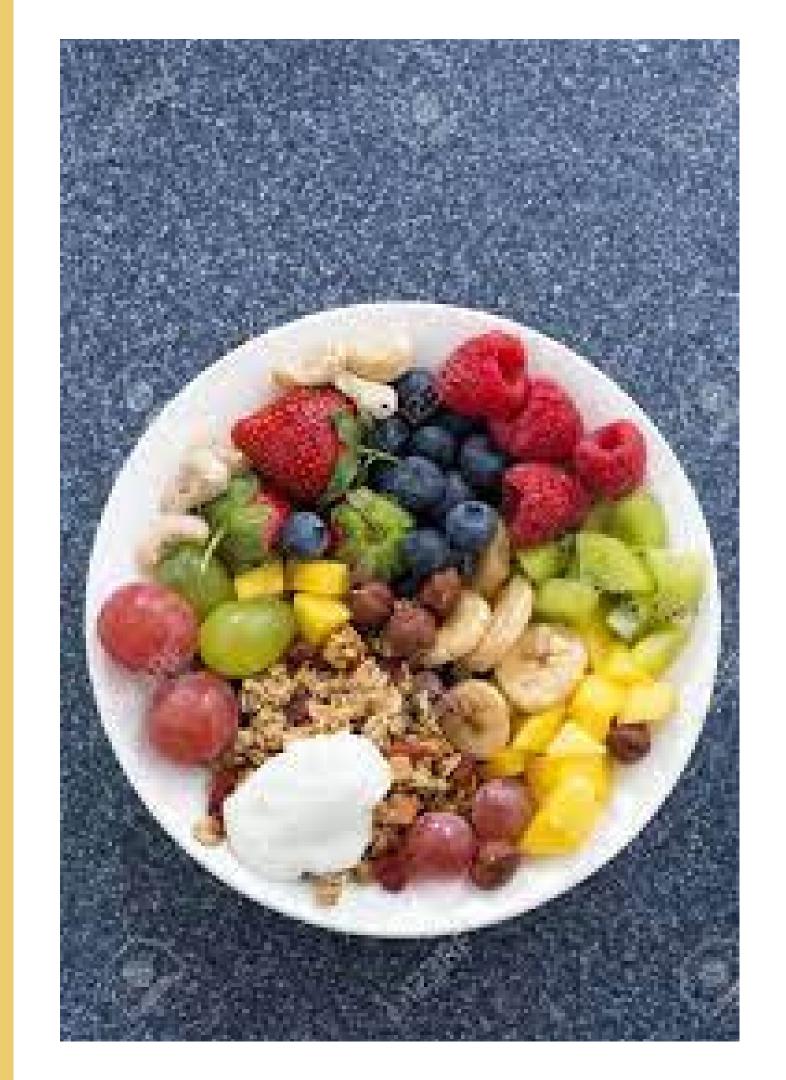

Continuous improvements and updates drive users to continue using the application and increase trust in the brand

3. Technologies adopted

AI food photo recognition function:

If you take a picture of the food you eat and send it to the app, the ai analyzes the picture and calculates the calorie and nutrient ratio, and shows it. This feature makes it easier for users to prepare their own diets to suit their personal preferences, and makes it easier to calculate the calories they consume per day without cumbersome registration of recipes.

4. Current Status and Future Prospects in the Item and Technology

| | CURRENT STATUS | FUTURE PROSPECTS |
|---------------------------------------|--|---|
| ITEM (adding diet management feature) | Workout overview Body status analysis Workout performance analysis Workout statistics | Provide perzonalised meal plans Analyze the nutritional content of diet through photos of food |
| TECHNOLOGY | Smart belt that collect real time data Al video analysis | Food analysis AI program (Food Lens) |

II. Market - Customer Analyses

Basically, our target customers are gym and fitness application users.

According to '국민생활조사' institution (2019), 13.4 percent of South Koreans use gyms. Divided by academic background, the participation rate of those with university graduation or higher is the highest at an average of 19%. The participation rate by age is 25.8% for 20s, 23.8% for 30s, and 17.7% for 40s. By gender, 19.4% of male and 7.8% of female go gym. And the higher the income, the higher the participation rate.

Gym

| | 초졸이하 | 52.7 | 0.9 |
|-----|--------------|------|------|
| 학력별 | 중출 | 38.5 | 4.0 |
| | 고졸 | 40.3 | 10.1 |
| | 대졸(4년제 미만) | 22.7 | 15.0 |
| | 대졸(4년제 이상) | 20.1 | 24.4 |
| | 대학원 이상 | 15.4 | 18.9 |
| 성별 | 남자 | 24.1 | 19.4 |
| 0 2 | 여자 | 40.4 | 7.8 |
| | 10C | 18.2 | 2.9 |
| | 200 | 13.5 | 25.8 |

| | 550~600만원 미만 | 23.5 | 16.7 |
| | 600만원 이상 | 14,2 | 18.6 |

II. Market - Customer Analyses

Additionally, our target customers are diabetes patients and potential diabetes patients. Diabetes is managed and prevented by healthy eating, maintaining a balanced weight through regular exercise

According to the Diabetes Fact Sheet in Korea released by the Korean Diabetes Association, in 2020, there were approximately 6 million diabetes patients aged 30 and above in Korea. Considering that in 2010, the number of diabetes patients was 3.2 million, this represents an increase of nearly double in the span of 10 years. Taking into account the population at risk for diabetes pre-stages, approximately 15.83 million people are potentially at risk, indicating that over 20 million Koreans are either affected by diabetes or at risk. In 2020, among all diabetes patients, individuals aged 65 and above accounted for 39.2%, with particularly notable rates among females aged 65 and above, where over half (51.2%) are affected by diabetes.

II. Market - Customer Analyses

Lastly, our target customers are individuals who are obese.

According to the Korea Disease Control and Prevention Agency (KDCA), The obesity rates varied across genders and age groups, with males showing an overall higher obesity rate (40.2%) compared to females (22.1%). Among males, the highest obesity rate was observed in the 30s age group (51.4%), while among females, it was most prominent in the 70s age group (30.6%). These findings indicate distinct patterns of obesity concerning gender and age brackets.

| 구분 | 전체 | 남자 | 여자 |
|--------|------|------|------|
| 전체 | 32.5 | 40.2 | 22.1 |
| 20대 | 27.7 | 38.8 | 15.5 |
| 30대 | 35.8 | 51.4 | 19.0 |
| 40대 | 34.1 | 48.1 | 19.7 |
| 50대 | 31.5 | 40.1 | 22.7 |
| 60대 | 30.1 | 33.0 | 27.6 |
| 70대 | 29.3 | 27.9 | 30.6 |
| 80대 이상 | 20.7 | 18.7 | 22.0 |

2. Competitors Analyses

According to the online public health resource, more than 97,000 fitness and health apps and The number of downloads per year amounts to 2.5 billion(2021).

The most popular app is Apple Health. It is an app that iPhone users can basically use, and it can be easily linked to Apple Watch. It collects health information from devices, sets medication reminders and organises health records.

MyFitnessPal is a popular app in the United States that includes a database of nutritious foods and fitness segments. This app has 200million users (as of 2022) Finally, Spotu is a company that is currently developing an app that is the almost same as our topic.. An app named 'PT쌤' has been created and will support the ai video analysis function. Several wearable devices are also on sale.

II. Market - Market Analyses

The global fitness market size was valued at USD 1,21 billion in 2021(straits research site report). The report said that it projected to reach USD 5.41 billion by 2030, registering a CAGR of 18.1% from 2022 to 2030.

According to Sensor Tower, a global mobile market data analysis company, revenue from in-app purchases of mobile health and fitness apps worldwide topped \$2.8 billion in 2022, a record high. From 2019 to 2021, revenue growth reached 43%, 50%, and 33%. In addition, as self-management has become an essential element in the Korean MZ generation these days, we can expect such exercise apps to grow in Korea.

In addtion, the demand analysis of the Global Health and Fitness Club Market size & share revenue was valued at approximately USD 83.24 Billion in 2022, according to a market research study published by Custom Market Insights

| 그 밖의 서비스업 | 30% |

VAT

Political Analysis

- Korea's corporate and value-added tax rates
- However, the exchange rate, along with tax laws in other countries, such as Chicago, will result in a tax on digital media service providers, which will increase the price of the application's subscription services.

윤석열정부 2년간 세금 감면 규모와 증기율

| 세 금 | 감면규모 | 증가율 |

한국인 2명 중 1명은 다이어트 중

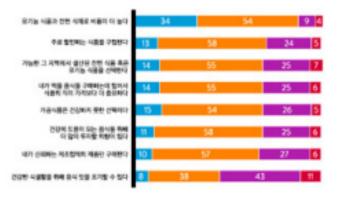

닐슨, 건강과 웰빙에 관한 글로벌 소비자 인식 보고서 발간

임중선 기자 jslim@medifonews.com

등록 2015-01-22 1203:41

닐슨이 최근 발간한 '건강과 웰빙에 관한 글로벌 소비자 인식 보고서'에 따르면 한국인 5명중 3명(60%)이 자신이 과체 중이라고 여기고 있으며, 응답자의 절반이 넘는 55%가 현재 다이어트 중이라고 밝혔다.

전세계 소비자들 역시 약 2명중 1명 (49%)이 자신이 과체중 이라고 생각하고 있으며, 절반에 이르는 50%의 전세계 소비 자들이 체중을 줄이려고 노력하고 있는 것으로 나타나, 다 건강한 음식에 대한 한국 소비자들의 인식 단위: %, 전체용답자: 506명

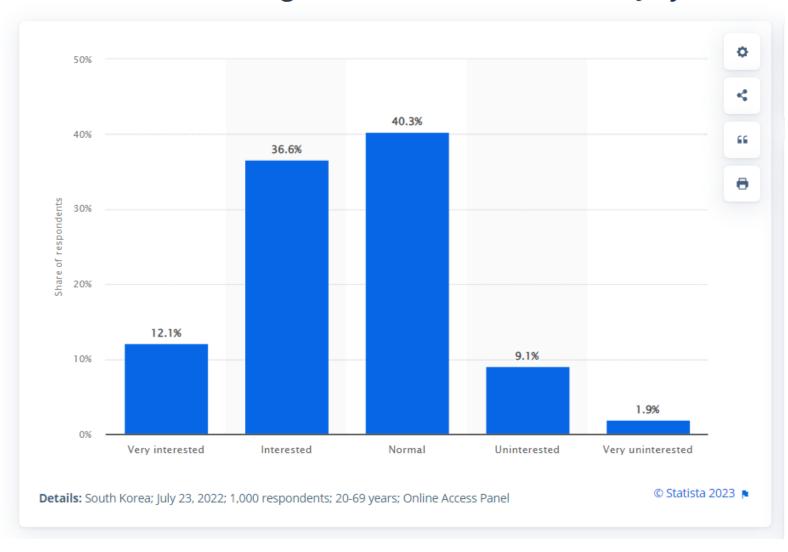

이어트와의 전쟁은 전세계 인구가 공통적으로 고민하고 있는 문제임이 다시 한 번 드러났다.

Social Analysis

- As a result, One in two Koreans are on weight control, and 70% are willing to invest more in healthy food.

Artificial Intelligence (Al) Personal Information Protection Self-Checklist

May 31, 2021

Legal Analysis

- In general, the absence of laws related to artificial intelligence technology creates large and small problems. This is also seen in the field of motion recognition.
- However, until now, dance coaching services have not been subject to any legal regulations in contrast to controversial ones such as facial recognition.
- Therefore, Al trainers are also not expected to be subject to major legal regulations.
- The Personal Information Protection Commission (PIPC) proposes to check the developer's checklist for fear of infringement of personal information by artificial intelligence.

Environmental Impacts of Food Production

Introduction Key Insights Data Explorer Research & Writing Charts Endnotes Cite This Work Reuse This Work

Agriculture has a significant environmental impact in three key ways.

First, it requires large amounts of fresh water, which can cause significant environmental pressures in regions with water stress. It needs water as input and pollutes rivers, lakes, and oceans by releasing nutrients.

It is a crucial driver of climate change, responsible for around one-quarter of the world's greenhouse gas emissions.

O2 II. BENEFIT ESTIMATION LOGIC

ESTIMATED SUBSCRIPTION FEE

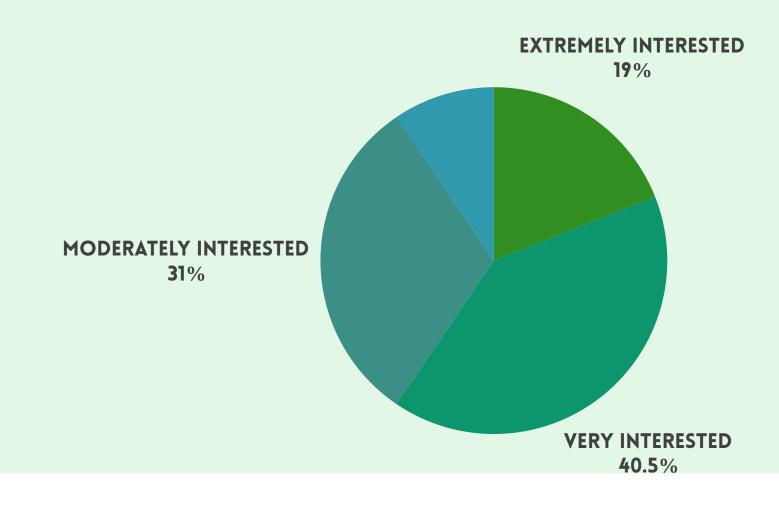

ACCORDING TO THE SURVEY, 35% OF PEOPLE SAID A SUBSCRIPTION FEE BETWEEN 3,000 AND 6,000 KRW IS APPROPRIATE

THUS, SUPPOSE THAT SUBSCRIPTION FEE IS 7,500 KRW PER MONTH.

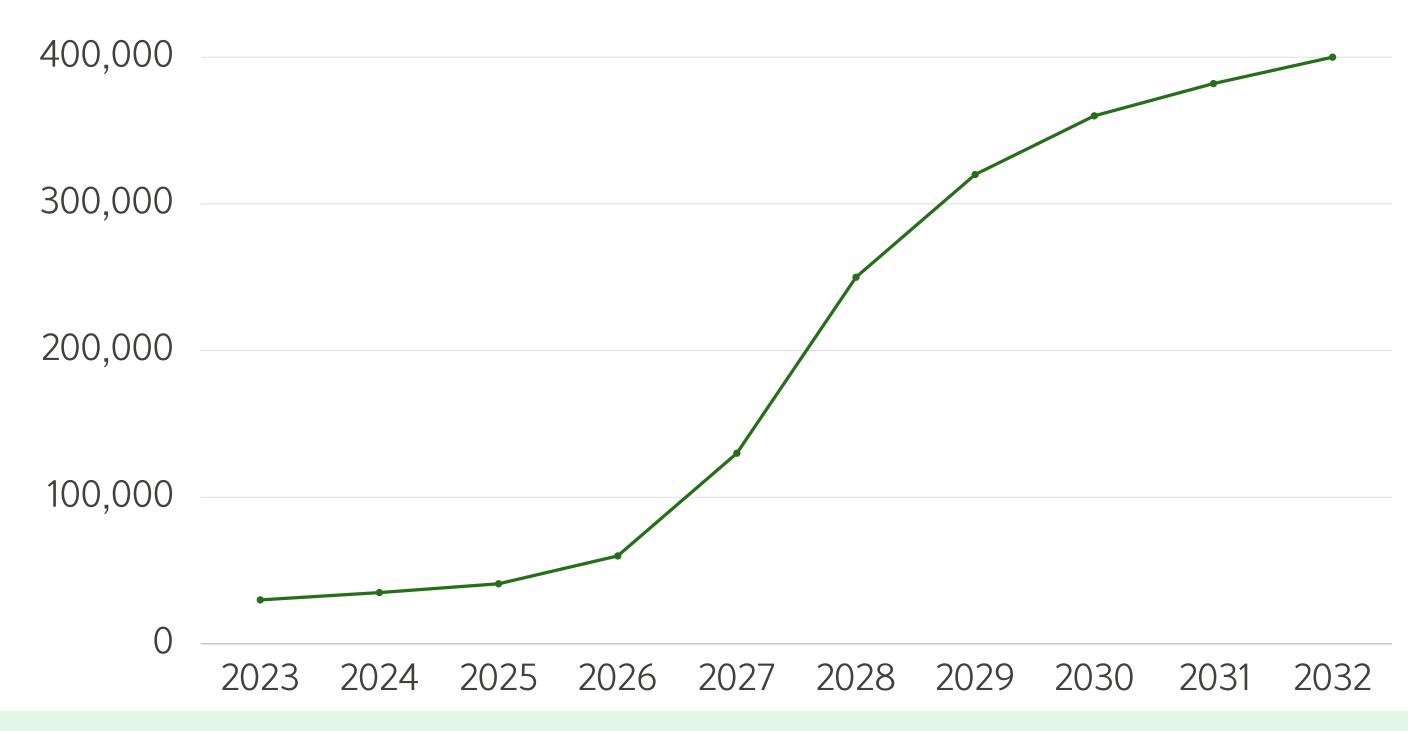

O2 ESTIMATED NUMBER OF USERS

Survey results: Would you be willing to use it if the fitness app adds a diet management feature?

According to the survey, 19% of people said they were interested in the diet proposal function of the fitness app

Thus, suppose that approximately 20% of the current 150,000 Planfit app users (30,000) are real USERs of the dietary suggestion service.

ESTIMATED NUMBER OF USERS

Train a video action recognition model

On this page

Train an AutoML model

This page shows you how to train an AutoML action recognition model from a video dataset using either the Google Cloud console or the Vertex Al API.

Technological Analysis

- Al motion recognition technology has grown significantly. In addition, human motion analysis systems are also used in convergence with IoT.
- A model that trains Al for posture recognition exists, making Al posture recognition training more convenient.
